## WOOD'S SEEDS ARE TESTED

And we know that they will grow before they are sent out. Even then they occasionally do not come up, due to causes over which we have no control, such as covering too deeply or not deeply enough; too little or too much moisture, cold weather, insects, or a crust through which the sprouts cannot penetrate, etc.; therefore, T. W. Wood & Sons give no warranty, express or implied, as to the description (name and kind), productiveness or any other matter of any seeds, bulbs or plants we sell, and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed.

## SWEET SUDAN GRASS

**SWEET SUDAN** is a greatly improved sudan grass from a hybridization of Leota Red Sorghum on common sudan. It has great palatability, livestock eating it to the ground before touching common sudan or other forage sorghums. Sweet Sudan has broader leaves, larger stems and makes taller growth, stooling heavier than common sudan. It is a truly great improvement over common sudan, and in our opinion will completely replace common sudan in a few years. The price of this new sudan, of course, is high this season, but we recommend that every farmer put in at least a few rows to prove to himself the many advantages for both hay or grazing over common sudan.

## WOOD'S BLUE RIDGE ENSILAGE CORN

This is one of the most outstanding varieties of corn on the market to be grown for ensilage purposes. Grows to a height of 13 to 15 feet, according to soil and moisture conditions. Has a larger stalk with wider blade and more compact growth than the famous Eureka Ensilage. Also two weeks earlier in maturity, and in our opinion will yield one-third more grain per acre. We recommend this corn very highly for ensilage purposes throughout northern and western Virginia, the higher altitudes of North Carolina and throughout the North and West.

## POULTRY--PIGEON--DOG

### Special Notice About Poultry Food Bags

We were very fortunate in securing quite a large quantity of extra fine, close weave, special quality print cloth material with beautiful designs, for packing our mash feed. This is a much better quality than the standard dress print bags generally used. This extra fine cloth normally retailed for 39c. or 40c. per yard and there are approximately 1½ yards in our mash food bags. Our scratch feed is packed in regular standard dress print bags, not as fine quality as our mash, but desirable quality for home use.
